Werner Dia Black

SENIOR FULLSTACK ENGINEER - TYPESCRIPT / NODE

+33750954317 | werner.diablack@gmail.com | linkedin.com/in/werner-diablack | github.com/Werner-DB |

Paris, France - remote-friendly (CET/CEST)

PROFESSIONAL SUMMARY

Senior fullstack engineer with years of experience building and shipping product features end-to-end on TypeScript/Node.js backends and React/Redux front ends. Hands-on owner of highly scalable web applications: event-driven services with queues, consumers, retries and idempotency; large-scale data backfills and migrations on PostgreSQL/MySQL and MongoDB; production performance, durability and security work with Prometheus/Grafana observability, JWT and Kubernetes HA. Builds production-grade LLM integrations (generative APIs, MCP servers). Strong test-driven approach (Jest unit/integration, E2E) and a track record of reviewing teammates' work and raising the technical bar.

CORE COMPETENCIES

TypeScript & Node.js | REST / tRPC / OpenAPI | MongoDB & NoSQL | Scalable Web Applications | Event-Driven Reliability | Test-Driven Development | Production Security & Observability | LLM Integration

WORK EXPERIENCE

ILLUIN Technology

January 2026 - Present

Senior Software Engineer

Paris

- Design and ship new product features end-to-end in a multi-package TypeScript monorepo (NestJS, tRPC, REST, OpenAPI/Swagger), from design through merge.
- Evolve event-driven services - queues, consumers, error tables for failed events, retry and reprocessing, idempotency and backfills - for production scalability.
- Run large-scale data backfills and migrations with dry-run CSV validation and credential encryption/decryption; daily raw SQL on PostgreSQL and MySQL.
- Improve performance, durability and security of production applications: diagnose HTTP 4xx/5xx errors, unhandled rejections, TLS errors and failing consumers; analytics via Prometheus/Grafana.
- Build production-facing generative-AI APIs and developer tooling (MCP servers for GitLab and Figma, LLM notebooks and AI coding assistants).
- Act as technical referent: code reviews, mentoring, documentation and architecture diagrams.

ILLUIN Technology

April 2023 - February 2026

Software Engineer

Paris

- Maintained and extended core APIs of an HR product suite (NestJS, tRPC, React, Redux) with end-to-end feature ownership.
- Built a strong test strategy (Jest unit and integration, E2E), debugging failing CI tests and improving delivery quality.
- Delivered Python services in production (FastAPI, uv).
- Hardened security and cloud posture: JWT, Kubernetes high-availability policies, DB access via Boundary, RDS/PostgreSQL and S3 upgrades on AWS.

AFD Tech (filiale d'Accenture)

October 2022 - April 2023

Full Stack Engineer

Paris

- Developed scalable microservices in Java Spring Boot and JavaScript.
- Integrated Keycloak with Active Directory for end-to-end session management.

- Ramped quickly onto unfamiliar stacks (Java to JavaScript) without losing delivery velocity.

EDUCATION

Master 2 Informatique Institut Polytechnique de Paris 2021-2022

Diplôme d'ingénieur Informatique Télécom SudParis 2019-2022

Échange académique (Erasmus) Linköpings universitet, Suède 2021

CERTIFICATIONS

Developing Applications with Google Cloud Google Cloud

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, NestJS, Express, tRPC, React, Redux, Python, FastAPI, Java, Spring Boot, HTML/CSS

Data & Messaging: PostgreSQL, MySQL, MongoDB, Firebase, RabbitMQ, Amazon S3

DevOps & Cloud: Kubernetes, Docker, AWS (S3, RDS), Google Cloud, GitLab CI/CD, Prometheus, Grafana

Testing & Tools: Jest, E2E testing, Swagger/OpenAPI, Keycloak, JWT, pnpm, Figma, Git

Languages (human): French (native), English (fluent), Spanish (basic)
